

Do I have access to the ASCEND platform?

Last Modified on 04/03/2026 4:18 pm EST

Access to the platform depends on the email address you use to sign in.

Typically, we rely on the domain of your institutional email address to determine eligibility.

Not all of the content in BenchSci's database is in the public domain, so we require registration. Scientists at **academic and non-profit institutions** can access a free, *limited* license to the ASCEND platform. BenchSci offers paid enterprise-wide license services for industry scientists, providing the privacy, security, expanded product offerings, and custom integration support that industry customers need. [Click here to read more about our Customers.](#)

1. Industry Scientists

Some companies have enabled **single sign-on (SSO)**, where you can log in using your company email address and employee login credentials when connected to the company network/VPN.

| Single Sign-On (SSO) | Email/Password |
|---|---|
| Use the dedicated SSO link for your company. Not all companies may show up on this page, so if you are unclear if your company has access, please reach out. | Login Page: app.benchsci.com |

2. Academic and non-profit institutions

A limited license to BenchSci's Selector Application, including access to our antibody reagent data, is available *at no cost* for scientists **actively associated** with an academic or non-profit institution.

We maintain a list of academic, nonprofit, and government institutions and valid **email domains** so that anyone with an email address from one of those domains can register for a free, limited license for Selector. If you encounter any trouble signing up, check out [this article](#) or reach out through the chatbot.
