

Searching across multiple product types

Last Modified on 25/03/2024 3:51 pm EDT

In the **Product Type** filter, click *Select Multiple* to search across more than one product type

Our search algorithm follows some unique rules when searching across product types. Whether **AND** vs **OR** is applied between reagents is context-dependent. Here is an example where *Antibody* + *RNAi* are selected.

- **Product** results tab: *Antibody* **OR** *RNAi* products that match the rest of the search criteria are shown
- **Figures** results tab: The figure results must contain both *Antibody* **AND** *RNAi* products that match the rest of the search criteria
- Even when included in a cross-reagent search, the logic between product subtypes uses the **OR** operator

[Click here](#) to learn more about choosing **product types** and **product subtypes**

Access to each of these **Product Types** depends on your company's license. If you have any questions, please reach out to us at support@benchsci.com!
