

# Finding antibodies with a known immunogen sequence

Last Modified on 17/03/2023 10:03 am EDT

## Applying the *Immunogen* filter exclusively shows antibodies with sequence data

Having access to **immunogen** information can be valuable for predicting antibody cross-reactivity, locating the probable target epitope, or planning for their use in experiments. We've worked with vendors to bring you antigen information for over 600,000 antibodies, and engaging the **immunogen** filter displays only products that include this sequence.

### Product Info

PRODUCT SPECS 

Target	VEGFA, ISOFORM L-VEGF121 OF VASCULAR ENDOTHELIAL GROWTH FACTOR A +27 more
Host	Rabbit
Clonality	Polyclonal
Conjugation	Unconjugated
Additional specs	Affinity Purified, Azide, Glycerol
Immunogen	MNFLLSWVHWSLALLLLYLHAKWSQAAPMAEGGGQNHHEVVKFMD ... <a href="#">See More</a>
Verification	Relative Expression

Most immunogen information is collected from vendors and we display it on the antibody product page. These data also feed our predicted cross-reactivity analysis which you can use to find new, off-label uses for antibodies in your research ([read more](#)). The **immunogen** filter is found under the *Antibody Specs* header (see below).

You can also preview and copy the **immunogen** sequence directly from the product results page.

Please check out our [\*\*Guide to Filters for Antibodies\*\*](#) in Selector to learn more about our filters!
