

Finding clone ID information

Last Modified on 17/03/2023 10:01 am EDT

If you want to find antibodies with a known clone ID, search for the clone ID by typing it directly into the search bar

You can find information on a known **Clone ID** using a few different methods.

First, you can search for your clone ID of interest by typing it directly into the search bar (or by using the **Clone ID** side filter). Figure results will include only antibodies that originated from this clone. On the **Product** results tab, you can similarly browse antibodies that originated from the clone in the search bar. At the top of the **Product** results page, clicking the clone banner takes you to a page unique to that clone where published figures and antibody products are shown together.

The clone ID is also displayed on product pages for monoclonal antibodies (when available), so you can include it in your next search (using the **Clone ID filter**) when you're looking for something similar.

Product Info

PRODUCT SPECS

Target	LY6G, LY-6G
Host	Rat
Clonality	Monoclonal
Clone ID	1A8
Conjugation	Unconjugated
Additional specs	Purified
