

Finding plasmids that express recombinant proteins

Last Modified on 17/03/2023 10:28 am EDT

Plasmids are on our radar for a future release to the Selector application

We are proud of the work that we've done to develop new data pipelines and machine learning algorithms to bring protein reagents to our ASCEND platform. Among those are *recombinant proteins*, which you can find by specifying *recombinant* under the **Protein Type** filter.

Adding **plasmid products** to our platform is a significant undertaking. Tackling plasmids means that we can get protein data to you as soon as possible. Developing machine learning algorithms and data pipelines to find and identify **plasmids** that encode recombinant proteins in the literature is on our roadmap.
