

Why are different specs shown for different products?

Last Modified on 16/03/2023 4:25 pm EDT

We show only the vendor-provided specs and hide any empty fields

Because the specifications important to different cell products vary widely, cell products have the longest list of possible specs on their product pages than any other offering in our application. That said, not every spec is relevant to each product subtype, nor are the same specs provided by every vendor, so we hide any empty fields so pages are easier to read.

On top of the filterable specs you find in the side filters, here's what you might find on a product page:

Morphology	Strain	Grade	Age
Sex	Ethnicity	Status	Antibody isotype
Formulation	Purity	Purification method	Storage conditions
Storage buffer	Quality assurance data	Size	Concentration
Number of cells	Freezing medium	Culturing medium	Culture conditions
Doubling time	Datasheet link		

If there are additional specs you'd like to see on our product pages, [please let us know](#)! We'd love to hear from you.
