

Are there prokaryotic cell lysates?

Last Modified on 16/03/2023 4:28 pm EDT

We are focused on eukaryotic cells for the time being

You'll notice that one of the [cell product subtypes](#) is lysates. However, when you open the **Species of origin** filter, all the options are eukaryotic in nature. Though it's on our roadmap to expand our cell offerings to include prokaryotic cells and lysates (we realize how important they are!), we are focused on eukaryotic cells at the moment.
