

Quick Start Guide: Selector

Last Modified on 28/10/2024 3:17 pm EDT

Up to **50% of reagents** are unsuitable and fail to produce reproducible results. Within the **ASCEND by BenchSci platform**, our **Selector** application helps scientists streamline the selection of suitable reagents and model systems and avoid unnecessary purchases and validation experiments.

1. Video Overview of Selector
2. Impact of Selector on Biomedical Research
3. Steps to Get Started with Selector

What is Selector?

Impact on Biomedical Research

Over **50,000 scientists** at 16 of the top 20 pharmaceutical companies, several biotech companies, and 4,500+ academic institutions use **Selector**. BenchSci has developed powerful technology that is **proven to:**

Accelerate research by selecting products in seconds vs. weeks

Reduce reagent spending and save millions per year

Optimize experiment success and increase research productivity

Have quantifiable impact with a proven, turnkey application

Explore data for a range of common reagents and model systems

Antibodies 

Represents about 40-50% of reagent waste, with millions of products and hundreds of vendors

CRISPR 

Requires complex selection of compatible vectors, Cas nucleases, and guide RNA

Proteins 

Includes recombinant and purified proteins which are often the second-highest source of waste after antibodies

Animal Models 

Often need to consult many studies to identify a model that has been successfully utilized in similar experiments

RNAi 

Challenging to search for since products are often custom and cited by their sequence

PCR Primers & Probes 

Fundamental molecular biology techniques with millions of products with slight variations that can be difficult to choose from

Cell Products 

A critical component of experiments that are prone to mislabeling and unclear validation methods

Comprehensive coverage of trusted literature sources and vendor databases

Experiment data from over **19 million** preprint, open- and closed-access publications

Partnerships with leading scientific publishers including **Springer Nature** and **Wiley**

Independent validation sources including **The Human Protein Atlas** and **EuroMAbNet**

Product catalog data for more than **80 million** products from **400 vendors**

Before

- Manually scanning papers for experiment details
- Manually scanning through vendor catalogs for suitable reagents and model systems
- Spreadsheets to track potential reagents

After

- Text and image-based AI detects details from a figure/experiment like a Ph.D. scientist
- Bioinformatics data and ontologies connect reagent and model usage to diseases, experiment types, and other contexts
- Streamlined gene/protein datasets to reduce common challenges with aliases
- Intuitive interface to curate lists of products that match experiment criteria and validation conditions

Start Searching with Selector!

Also available in [Japanese \(日本語\)](#) and [Chinese \(中文\)](#).

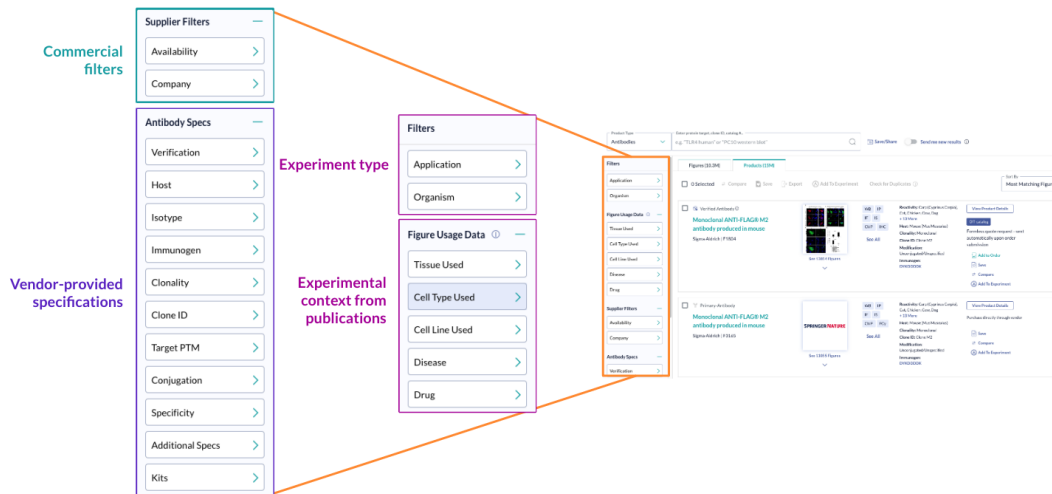

1. Log into Selector

Log in with your institutional email address at app.benchsci.com or click your company logo in this article.

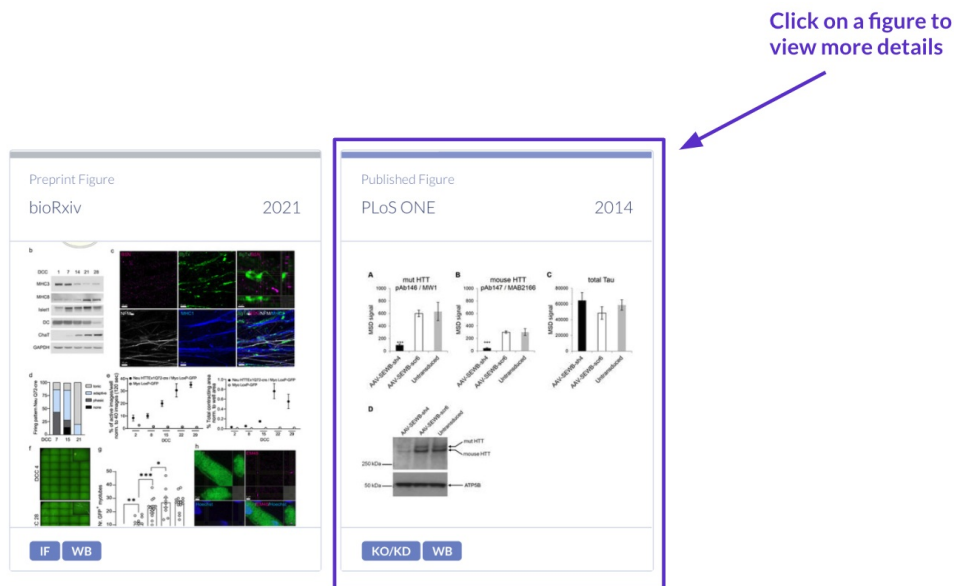

2. Enter search criteria

3. Filter and view search results that match your experiment conditions

4. View figures from peer-reviewed publications, preprints, vendors, and third-party sources

5. Review details from figures to learn more about what reagents/model systems are used in experiments
