Quick Start Guide: Selector

Last Modified on 15/07/2025 3:51 pm EDT

Up to 50% of reagents are unsuitable and fail to produce reproducible results. Within the **ASCEND by BenchSci platform**, our **Selector** application helps scientists streamline the selection of suitable reagents and model systems and avoid unnecessary purchases and validation experiments.

- 1. Video Overview of Selector
- 2. Impact of Selector on Biomedical Research
- 3. Steps to Get Started with Selector

What is Selector?

Impact on Biomedical Research

Over **50,000 scientists** at pharmaceutical companies, biotech companies, and 4,500+ academic institutions use **Selector**. BenchSci has developed powerful technology that is **proven to**:

Accelerate research by selecting products in seconds vs. weeks

Reduce reagent

spending and save

millions per year

Optimize experiment success and increase research productivity

Explore data for a range of common reagents and model systems

Antibodies 🏋	<u>CRISPR</u>		
Represents about 40-50% of reagent waste, with	Requires complex selection of compatible vectors, Cas		
millions of products and hundreds of vendors	nucleases, and guide RNA		
Proteins 🗧	Animal Models		
Includes recombinant and purified proteins which are	Often need to consult many studies to identify a model		
often the second-highest source of waste after	that has been successfully utilized in similar		
antibodies	experiments		
RNAI 5	PCR Primers & Probes		
Challenging to search for since products are often	Fundamental molecular biology techniques with		
	millions of products with slight variations that can be		
custom and cited by their sequence	difficult to choose from		

Cell Products of

A critical component of experiments that are prone to mislabeling and unclear validation methods

Comprehensive coverage of trusted literature sources and vendor databases

Experiment data from over 27 million preprint, open- and closedaccess publications Partnerships with leading scientific publishers including Springer Nature and Wiley

Independent validation sources including The Human Protein Atlas and EuroMAbNet Product catalog data for more than 85 million products from 450 vendors

Leverage AI technology to advance your workflow

After

- Text and image-based AI detects details from a figure/experiment like a Ph.D. scientist
- Bioinformatics data and ontologies connect reagent and model usage to diseases, experiment types, and other contexts
- Streamlined gene/protein datasets to reduce common challenges with aliases
- Intuitive interface to curate lists of products that match experiment criteria and validation conditions

KDa human recombinant modified amino-terminal BPI ir ibinant holo BPI were provided by XOMA (14) | :BPI 21 ; n assay, and no endication was detected. These preparat Primary antibiodes for immunobletting included anti-USA). Akt (Cell Signaling). phospho-p4442 (Cell Signaling). Yn Inc. Santa Cruz CA USA) were obtained from comme Bes were from RAD SI amobarbial (El LIII) orth. TX. USA): Affi-GE minimum Mi

Before

- Manually scanning papers for experiment details
- Manually scanning through vendor catalogs for suitable reagents and model systems
- Spreadsheets to track potential reagents

Start Searching with Selector!

Also available in Japanese (NMM) and Chinese (NM).

1. Log into Selector

Log in with your institutional email address at **app.benchsci.com** or **click your company logo in this article**.

2. Enter search criteria

3. Filter and view search results that match your experiment conditions

4. View figures from peer-reviewed publications, preprints, vendors, and third-party sources

5. <u>Review details from figures to learn more about what reagents/model systems are used in experiments</u>

6. Review product details

		Target	HTT, HUNTINGTIN	
		Host	Mouse	View product specifications
		Clonality	Monoclonal	
		Clone ID	1HU-4C8	
Application	Published Figures	Vendor Recommended	Published Application Distribution	Learn more about how
Western Blot	571	\odot		the reagent or model system has been used in experiments
Immunostaining	140			
Immunoprecipitation	120	\oslash	762 Published Figures from 292 Publications	

7. Explore custom data integrations to build confidence in your search

Additional features integrated with your company's internal data may be available for scientists at your company. **Log into the Knowledge Center** to see company-specific articles.

Questions or Feedback?

Access to reagent or model system types depends on your company license. Use your ASCEND credentials to <u>log into the Knowledge Center</u> to view help and tutorial articles relevant to your company.
